TABLE 0
Components used

Procedure

1) We connected the 555 timer circuit according to the figure 1

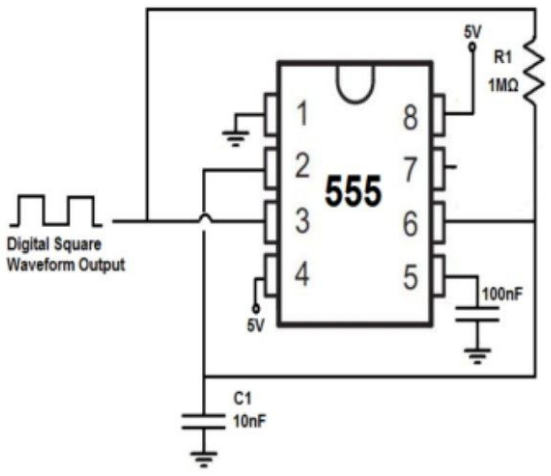

Fig. 1. Connection in 555 timer circuit

2) Then we connected Clock output of 555 timer circuit to the clock signal of D-Flip flops

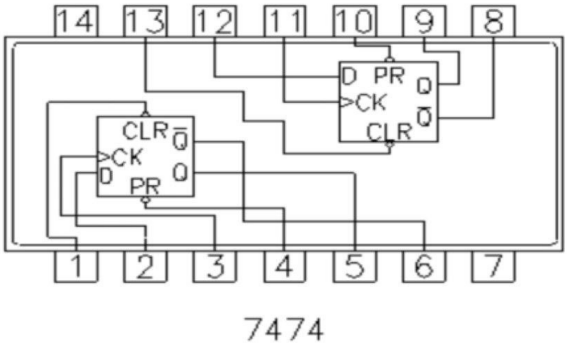

Fig. 3. Connection in 7474 IC

3) Now we make the circuit for shift registers using a 4 D-Flip flops (using two 7474 IC's)
4) Then we connected XOR gate (7486 IC) according to the figure 4

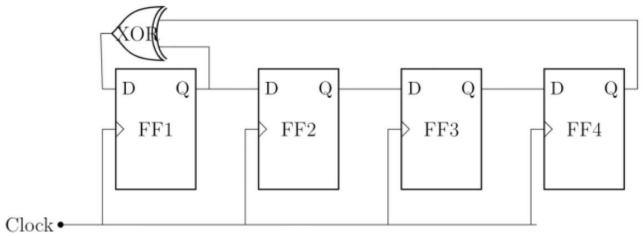

Fig. 4. Connection in XOR gate

5) then we connected the decoder (7447 IC) and connected its A,B,C,D with Q_0,Q_1,Q_2,Q_3 respectively as per the figure 5
6) Then we connected The seven segmented display and then connected it with the dceoder (7447 IC) according to the table 6 and the figure 6
7) We connected all the independent parts with each other and then connected the power source

Output

Output was changing digits on the seven segment display the output is shown in figure 7
